## Central Dispatch on the Internet: Web-Based Dispatching Beats Out the Competition

**THE PROBLEM:** Concrete producers face many challenges, including optimizing driver resources, improving on-time deliveries, reducing delivery costs, and decreasing the dispatcher's workload.

It is too costly and tedious to set up and maintain a central dispatching system for many producers to take advantage of its power. Local Area Networks (LAN) and Wide Area Networks (WAN) must be built. Computers, servers, and programs must be purchased, installed, and maintained... and what happens during a lightning strike?

**THE SOLUTION:** Producers can implement a state-of-art central dispatch system like Sysdyne's Cloud Native **ConcreteGO** Dispatch software without a big upfront investment in hardware, software, or IT specialists and still get the traditional dispatch functions and even more from a desktop browser for a modest subscription fee.
