

## Concrete Products: Sysdyne Pioneer Platform Raises Batch Control to the Cloud

Sysdyne Technologies presents its latest tool for ready mixed concrete producers, Pioneer Cloud Batch, as the first cloud-native concrete batch control system. Unveiled at World of Concrete 2021 as an alternative to traditional, local computer-hosted solutions, the platform brings batch software online and makes loading, weighing and mixer truck charging sequences visible to individual or multiple users.

Pioneer Cloud Batch fundamentally changes the perception of batch integration. Rather than following the antiquated Universal Link protocol, batch controls can integrate with dispatch or enterprise software using Open Application Programming Interface. Open API eliminates traditional data exchange protocol limitations and allows users to gain more insights of their operations.

The shared ConcreteGO.com and Pioneer Cloud database enables ready mixed concrete producers to manage mixes, materials, customers, projects, orders, and tickets in a single place without downloading or uploading data. Inventory can be accurately tracked in real-time.
