

Why Track It with TrackIt?

Like most things, one size never fits all. The same rings true for telematics systems; data and reporting should be customizable to your fleet's specific needs.

Whether you want to keep your thumb on nonproductive time, monitor driver performance, make sure your vehicles are healthy, or optimize your routes, it's imperative to choose a solution designed for your particular business.

Command Alkon's TrackIt solution was designed especially to meet the construction industry's mixed-fleet tracking, reporting, and documentation requirements while also providing data-based business intelligence and insights.

With GPS truck tracking and telematics as well as fleet and workforce management, TrackIt gives you the visibility you need to optimize your fleet operation:

- Analyze driver habits to increase fuel economy and improve safety.
- Monitor vehicle health to improve maintenance and performance.
- Examine jobs, routes, productivity, and performance to eliminate nonproductive time.
- Eliminate paper timesheets to save time and improve accuracy.
- Integrate performance, payroll and other relevant data into business systems, making it easy to review, edit, approve, pay and document.
